## ABSTRACT:

PROBLEM TO BE SOLVED: To prevent trouble due to the use of a program or file of an illegal generation since the generations of programs and files are checked and updated by making an on-line connection of even a terminal which is used off-line periodically by checking the off-line use limit period.

SOLUTION: The trouble can be solved by obtaining resources from a server for a program and a file whose illegal generation flags of a terminal-side generation management file 110 are checked at the time of an off-line connection by using storage destinations as keys and downloading an off-line usable period file 106 and a server-side generation management file 107.
